Objective

Enthusiastic and detail-oriented aspiring DevOps and Cloud Engineer with a strong foundation in **Linux systems**, **cloud platforms (AWS)**, and **CI/CD pipelines**. Seeking a remote **Junior Linux Support**, **DevOps**, or **Cloud Engineer** role to apply my knowledge, support automation tasks, and grow in modern infrastructure environments. Passionate about continuous learning, collaboration, and contributing to operational efficiency through DevOps and cloud best practices.

Portfolio Projects

• **Cloud-Based Static Web Application Deployment with Monitoring**
Deployed a static web application on **AWS** using **EC2, S3,** and **Terraform.** Containerized the app with **Docker** and integrated **real-time monitoring** using **Prometheus and Grafana.** Used **Git** and **GitHub** for version control and project collaboration.

• **github-actions-cicd-workflow**
 Developed a **CI/CD pipeline** using **GitHub Actions** with custom **YAML workflows** to automate testing and deployment to a mock environment.

Technical Skills

- **Operating Systems**: Linux (Ubuntu, CentOS, Red Hat)
- **Cloud Platforms**: Basic knowledge of AWS.
- **Infrastructure as Code (IaC):** Terraform (hands-on experience)
- **DevOps Tools**: Git, Docker, Jenkins, Ansible (basic handson knowledge)
- **Scripting**: Bash, YAML
- **Version Control**: Git & GitHub
- **CI/CD Concepts**: Pipelines, Automation (theoretical and basic handson knowledge)
- **Monitoring Tools**: Basic familiarity with Prometheus & Grafana

Education

Diploma in DevOps Engineering (EduQual Level 5).   **ALNAFI** – *In Progress*

Private - I COM   **Completed In 2012**

Languages

- **English** – Fluent
- **Urdu** – Native
